(while supplies last)

### Aluminum Repair Isolation Station

Aluminum repair is a unique process that requires a dedicated set of tools and an isolated area in order to prevent contamination from compromising the repair. GFS' aluminum repair stations are flexible, effective solutions for proper isolation of aluminum repair processes.

The Aluminum Repair Isolation Station is GFS' most cost-effective environment for aluminum repair. Heavy-duty, non-combustible curtain walls prevent against contamination during the aluminum repair process.

### Custom Curtain Enclosures

Separate and maximize your usable space with a retractable barrier for confining dirt, dust and contaminants, and controlling cold loss. All materials meet NFPA 701 for fire retardancy.

Curtain walls can be used in all of your auto body shop areas including:

- |                          |                          |
|--------------------------|--------------------------|
| Prep stations            | Wash bays                |
| Limited paint enclosures | Grinding & sanding areas |
